EDUCATION

Georgia Institute of Technology, Atlanta, Georgia

Bachelor of Science in Computer Science - Expected Graduation May 2029 – GPA 3.77/4.00

Relevant Coursework: Data Structures & Algorithms, Intro to AI, Perception and Robotics, Computer Organization and Programming, Discrete Mathematics, Linear Algebra, Multivariate Calculus

WORK EXPERIENCE

Data Engineering Intern at Cleveland Guardians, Cleveland, Ohio

May 2026 – July 2026

- Built sports science and biomechanics data pipelines in Databricks to transform athlete and performance data for downstream analysis.
- Migrated production baseball data pipelines from Airflow to Databricks using bronze/silver/gold architecture, incremental processing, and serverless jobs.
- Developed a pinch-hit tendency advance scouting report used by Guardians staff for game preparation and decision-making.
- Integrated external vendor REST APIs, implementing authentication, pagination, rate-limit handling, data normalization, and automated ingestion.

Independent Software Developer at GMS, Cleveland, Ohio

May 2025 – Present

- Developed a CMMI compliance audit management system with Next.js, TypeScript, and Supabase, integrating AI-powered document analysis, multi-tenant audit tracking, and automated text extraction.
- Architected a scalable document processing pipeline with OCR fallback, RLS security, and RESTful APIs.

Learning & Development Intern at Cleveland Guardians, Cleveland, Ohio

May 2025 – July 2025

- Designed and developed a comprehensive Notion-based internal website for the Learning & Development team, serving over 200 users.

PROJECTS

Hivemind (AI agents management system)

May 2026 – Present

- Built a platform for creating, managing, and coordinating autonomous AI agents across tasks and workflows.

Firefighter Safety Monitoring System

August 2025 – May 2026

- Built an ESP32-based wearable prototype integrating heart rate, SpO₂, and BLE proximity sensing with real-time display and wireless data transmission.

ClashRoyaleBot

August 2025 – Present

- Built an automated Clash Royale bot that uses computer vision and game-state analysis to make real-time gameplay decisions.

LEADERSHIP AND COMMUNITY IMPACT

GT Baseball Analytics | Leadership Team

January 2025 - Present

- Develop software, analytical models, and data infrastructure used by Georgia Tech Baseball, including ingestion and processing pipelines for Trackman game data.
- Built a defensive positioning platform that visualizes player locations across plays, helping coaches analyze positioning and inform defensive strategy.

Grand Challenges LLC, Georgia Tech

Aug 2025 – Present

- Collaborated on an interdisciplinary team to research, design, and prototype a wearable safety system addressing health and environmental risks faced by firefighters.

SKILLS

Programming Skills: Python, Java, SQL, JavaScript, TypeScript.

Technologies: Databricks, Apache Airflow, Next.js, Supabase, Git, REST APIs

Technical Areas: Data Engineering, Machine Learning, Computer Vision, ETL/Data Pipelines, Backend Development

Interests: Artificial Intelligence, Sports Analytics, Robotics
